AI Engineering graduate with experience in ML/DL and Salesforce development. Strong analytical and programming skills with internship experience in tech solutions..

Experience

MyCaptain

Feb 2025 – Present

Salesforce Intern (CRM)

Nagpur

- Worked as a **CRM Salesforce Analyst** managing customer data and lead workflows.
- Created reports and dashboards to track performance and conversions.
- Automated tasks using **Salesforce Flow** and **Process Builder**
- Used **Einstein Lead Scoring** to prioritize high-value leads effectively. Managing end-to-end business operations, streamlining processes to enhance efficiency and productivity

Freelance

Dec 2021 – Present

Graphics Designer

Remote

- Delivered 50+ graphic design projects, including T-shirt designs, logos, and posters, achieving a 95% client satisfaction rate.
- Achieved a 30% increase in repeat business through consistent quality, configuration management, and timely project completion.
- Contributed to 20+ diverse Appen projects, implementing new and emerging technologies to meet customer requirements.

Aikharthya & Make a Difference (MAD) – NGO

Jan 2022 – Dec 2024

Campaign Team Member & Event Coordinator

Nagpur

- Led outreach programs to improve education, health, and nutrition for underprivileged communities.
- Conducted awareness campaigns on hygiene, nutrition, and mental health, reaching 300+ people.
- Collaborated with NGOs to distribute essentials like food, clothes, and study materials.

Projects

Capstone Project

Hate Speech Detection

- **Developed a system using NLTK** to detect hate speech with advanced text preprocessing and sentiment analysis.
- **Implemented ML models** to classify and flag offensive content, reducing false positives effectively.
- Enhanced detection accuracy through optimized feature extraction and **linguistic pattern analysis**.

Health Cure

Disease Detection System

- Designed an **AI-driven diagnosis system leveraging CNNs** to analyze patient symptoms and medical reports.
- **Achieved 95% accuracy** in disease detection, Aiding healthcare professionals in timely decision-making.
- Automated the diagnostic process to improve efficiency and reduce human error in medical assessments.

Real-Time Orange Grading System

Automated Classification of Oranges

- Built an AI-based system using **YOLO and TensorFlow** to classify oranges as ripe, raw, or rotten.
- **Deployed on Raspberry Pi** with real-time image processing for agricultural quality control.
- **Achieved 92% detection accuracy** by optimizing preprocessing techniques for varying conditions.

Certificates

Coincent Microsoft IBM (01/2023 - 03/2023)
