SUMMARY

AI/ML Intern at Immverse AI with hands-on experience in machine learning, deep learning, and NLP. Specialized in Retrieval-Augmented Generation (RAG), LLMs, and transformer-based architectures. Skilled in model fine-tuning, prompt engineering, and deploying real-world AI applications.

SKILLS

Programming Languages: Python, C, C++

Frameworks & Libraries: TensorFlow, OpenCV, NLTK, Pandas, LangChain, Transformers, Microsoft Autogen

Tools & Technologies: GitHub, Hugging Face, Gradio, GPT/LLM API Integration

Specializations: Generative AI, Machine Learning, Deep Learning

EDUCATION

Bachelor's Degree in Artificial Intelligence

G.H. Raisoni College of Engineering and Management, Nagpur | 2021 – 2025

CGPA: 7.31/10

Class 12th

Maharashtra State Board | 2020 – 2021

Percentage: 82.17

Class 10th

Maharashtra State Board | 2018 – 2019

Percentage: 70.60

ADDITIONAL INFORMATION

Certifications:

- Introduction to Generative AI – Google Cloud Skill Boost
- Fundamentals of Deep Learning – NVIDIA
- Automation Anywhere – Automation Anywhere University

Volunteering Experience

- Chair, IEEE Computational Intelligence Society – GHRCEM (2024 – Present)
- Webmaster, IEEE Student Branch – GHRCEM (2023 – 2024)
- Volunteer, International Conference on AI and Quantum Computation (2023)

PUBLICATIONS:

- OCT VISION: RETINAL DISEASE DETECTION USING DEEP LEARNING

WORK EXPERIENCE

Data Science Intern Cluster Computing | December 2023

- Developed Tableau dashboards for actionable data insights and visualizations.
- Enhanced dataset usability by implementing robust cleaning and preprocessing techniques.

AI/ML Intern

ImmverseAI | December 2024 – Present

- Working on the development and fine-tuning of the Bhartiya GPT, a specialized large language model (LLM).
- Responsible for data collection and preprocessing to support model training and optimization.

Python Developer Intern

Fluxion Innovations | March 2024 – April 2024

- Developed Python scripts to automate design tasks and streamline digital asset workflows.
- Collaborated on backend logic for client-facing design tools, ensuring efficient and reusable code.

PROJECTS

Agentic Bias Classifier: Multi-Level Bias Detection System

- Developed a multi-agent bias detection framework using Microsoft Autogen with JSON-based configurable categories.
- Implemented a Streamlit UI with user-selectable LLM APIs (OpenAI, Anthropic, HuggingFace, Cohere, Groq, Azure) for real-time analysis and structured outputs.

Agentic Researcher: AI-Powered Information Extraction & Analysis System (Work in Progress)

- Designed a multi-agent pipeline using Microsoft Autogen, where one agent scrapes data via Crawl4AI and Tavily, another rewrites and critiques content, and a third extracts emerging terms from the data.
- Integrated FAISS as the vector database for efficient storage and retrieval, with Groq LLM client as the current model backend.

Retinal Disease Detection Using CNNs:

- Developed CNN models (VGG16, DenseNet) on OCTDL dataset with 7 disease categories.
- Achieved 98% accuracy using data augmentation on used dataset.
